

IP Networking Audio Adapter

NAP4S

Description:

NAP4S is a popular used model for TCP/IP network audio system solution. It is used to transmit audio over network to amplifier and loudspeakers. So the nominal connection way as below: Control port by RJ45 connector to LAN switch and analogue outputs to amplifiers.

The IP network audio adapter has 19" rack mounted design, so it is usually the biggest advantage of the network audio system. It has super distance audio transmission, simultaneous maximum program task and non-dedicated network wiring installed in the control room together with high watts power amplifier for a big size application. An amplifier can be installed in each floor or local terminal area using this LAN network technology. As a result, cable wiring costs will be reduce.

Features:

- 19" rack mounted TCP / IP network audio adapter in 2U height.
- Built-in single channel TCP / IP decoder.
- Decode digital audio data to analogue amplifier.
- Capable of IP background music, zone paging & voice alarm system.
- 4 channel line outputs to amplifiers.
- 4 channel 100V speaker inputs loop and 4 channel 3 wired volume control.
- Built-in dual network interface, can easily realize network port backup and cascade with other equipment, etc.

IP Networking Audio Adapter

Specification:

Model	NAP4S
Network Port	Standard RJ45 input
Transmission Speed	10/100Mbps
Communication Protocol	TCP/IP, UDP & IGMP
Audio Format	MP3
Sampling rate	8K-48KHz
Audio Mode	16 Digit Stereo Level
Frequency Response	20Hz-20KHz
THD Mic/Line Input	< 0.01 dB
THD Background Music Inputs	< 0.05 dB
S/N Radio Microphone	> 84 dB
S/N Ratio Stereo	>100dB unbalanced
Crosstalk @1KHz	-85dB
Aux Input	One Input, 350mV, Industrial Standard Screw Terminals
Aux Output	Four Output, 1V, Industrial Standard Screw Terminals
Aux Output Impedance	1K Ω
Power Consumption	\leq 18W
Power Supply	\sim 110V/60Hz or \sim 230V/50Hz
Dimensions	484 x 353 x 88mm
Weight	5.16KG
